### MOLECULAR BIOLOGY

SARS-CoV-2(COVID 19)DETECTION BY RT PCR NOT DETECTED

( Method : RT PCR)

( Specimen: Nasopharyngeal&Oropharyngeal swab)

ICMR NO:418994513

Notes : .

Detected:Indicates the presence of SARS-CoV-2 (COVID 19)in the given specimen  
Not Detected:Indicates the absence of SARS-CoV-2 (COVID 19)in the given specimen

A "Detected" result is indicative of infection with SARS-CoV-2 (COVID 19) but does not rule out bacterial infection or co-infection with other viruses. The agent detected may not be the definite cause of disease.

A "Not Detected" result does not rule out infection. A careful consideration to combination of epidemiological factors, clinical history, examination, other relevant investigation findings and treatment history should be done.

Test Limitations:

- A detected result does not distinguish between a viable/replicating organism and a non-viable organism.
- False Negative results may be seen in samples collected too early or too late in the clinical course of the illness. Kindly refer to the latest ICMR guidelines.
- Presence of PCR inhibitors in the sample may prevent DNA amplification. Paradoxical results may arise due selection of inappropriate specimens and contamination during specimen collection.
- Sensitivity of this test depends upon the quality of the sample submitted for testing and stage of the infection.

Comments:

ICMR Registration Number: CHENNAI-ASLCTN, TIRUNELVELI-ASLTTN, THANJAVUR-ASLASTTN, BENGALURU-ASLASPLBK  
HYDERABAD-AARSCLASCPMT MUMBAI-AASALMMH DELHI-AASALADD

Kindly consult referring Physician/ Authorized Govt. hospital for appropriate follow up.

Details of all the positive patients will be communicated to Epidemiology Cell – Greater Chennai corporation.

Please ensure to notify the local / state/ federal authorities as per the existing rules/regulations.

## End of the Report
